

Hyperlinking to TAIR

here are three ways of hyperlinking to a page displaying information generated from TAIR DB.

- **Linking using TAIR accession**

Any TAIR Object (e.g. clone, gene, genetic marker, sequence, etc.) can be linked to its detail page using its TAIR accession, which is a unique identifier in TAIR DB. The base URL for linking is:

<http://arabidopsis.org/servlets/TairObject?accession=>

e.g. <http://www.arabidopsis.org/servlets/TairObject?accession=Clone:1768>

A list of TAIR accessions for Genes, Clones, and Genetic Markers on the sequenced genome is available from our ftp site at:

ftp://ftp.arabidopsis.org/home/tair/Maps/seqviewer_data/

- **Linking to Locus using name and type**

Any [Locus](#) can be linked to its detail page using its name and type. The name of a Locus is unique and used by TAIR, TIGR, and MIPS. The base URL for linking is:

<http://arabidopsis.org/servlets/TairObject?type=locus&name=>

e.g. <http://www.arabidopsis.org/servlets/TairObject?type=locus&name=AT4G18960>

- **Linking to Stocks using stock number**

Any Stock can be linked to its detail page using its stock number. The number of a stock is unique and used by TAIR and ABRC. The base URL for linking is:

http://arabidopsis.org/servlets/StockSearcher?action=detail&stock_number=

e.g. http://www.arabidopsis.org/servlets/StockSearcher?action=detail&stock_number=C00006

If you prefer to use programmatic methods to retrieve data from TAIR please contact curator@arabidopsis.org. For TAIR's scripting policy, please see [TAIR FAQ for Developers](#)
