# Gene info table

The gene information in data panel next to a gene family tree can be downloaded in csv (comma-separated values) format. The columns are:

- Uniprot ID
- Gene ID
- Gene name
- Organism
- Subfamily name
- Any columns after 'Subfamily name' are GO functional annotations. Each column is a GO molecular function or biological process term that is annotated to at least one member of the gene family AND the annotation is supported by an experimental evidence (indicated by 'EXP') or phylogenetic inference (indicated by 'IBA'). A '0' indicates absence of either annotations.
